RE: Letter of Recommendation

To Whom It May Concern:

This letter of recommendation is to acknowledge the outstanding work that Lumos has provided to Scorpio Gold (US) Corporation's (Scorpio) Mineral Ridge Gold Mine. The Mineral Ridge Gold Mine, located at the top of the Silver Peak Range in Esmeralda County, is owned and operated by Scorpio's subsidiary, Mineral Ridge Gold, LLC (MRG). Since early 2011, Lumos has provided water resource services to our mine including water rights assistance and groundwater exploration and development. The Mine, which was purchased in 2010, only had one production well for supplying water to all of the mining operations. In late 2011, the well began losing capacity, requiring the mining operations to start rationing water. Our company hired Lumos to identify a new groundwater source and develop it into a new production well.

During the project, there were many obstacles that Scorpio and Lumos worked together to overcome to keep the project moving forward. A few of the obstacles included BLM permitting of the second water well, temporary water right permits and water right agreements, and drilling contractor disputes. Through it all, Lumos conducted themselves very professionally and worked diligently to complete the project as quickly as possible, including conducting the pumping test and analysis (required by the BLM) over the Christmas and New Year Holidays. Lumos' expertise in identifying and developing the second well source for our mine brought the mining operations back to full capacity.

We were very happy with the final product and would hire Lumos' staff, Michael Hardy and Michael Widmer, for any future groundwater investigations and well development projects.

Sincerely,

Carlene Lancaster
Environmental Manager
Scorpio Gold (US) Corporation
